***Response to Arguments***

1. Applicant's arguments, see Applicant's Remarks, filed 8/19/2004, with respect to claims 1-17 have been fully considered and are persuasive.

***Allowable Subject Matter***

2. Claims 1-17 are allowable over the prior art of record.

3. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method of recording, with a channel change function, and playing back sessions from multiple digitally encoded, interframe compressed streams of audiovideo data. The independent claims identify the feature of "recording each formatted stream on a recording medium as one or more sessions while permitting changes between different formatted streams, wherein the end of each session defines a channel change between different formatted streams, and the feature of reading each session from the recording medium; applying each session to a synchronizable decoding device; detecting one or more splice point indicators; determining the end of a session based on the information provided by the detected splice point indicators; and re-synchronizing the decoding device to a reference clock value corresponding to a next session in response to detection of each session end".

The closest prior art, Kato Motoki (EP 1043892) discloses a conventional recording and playing back packetized video programs, either alone or in combination fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
